Yonatan Tadese

Full-Stack Developer · Backend-focused

Addis Ababa, Ethiopia / yonitad2404@gmail.com / +251 964 582 841 / yoni-tad.com / github.com/yoni-tad / linkedin.com/in/yoni-tad / medium.com/@yonitad2404

SUMMARY

Self-taught full-stack developer building for clients since 2022, with a focus on the backend: REST APIs, authentication, data models, payments and the admin tools businesses run on. Currently building Bego, a crowdfunding platform, and Bekollo, an e-commerce Telegram Mini App. I work in Node.js, Express and PostgreSQL on the server, Next.js and React on the web, and Flutter on mobile.

SKILLS

Backend	Node.js, Express, PHP, REST APIs, GraphQL, WebSockets, BullMQ
Frontend	Next.js, React, Vite, TypeScript, Tailwind CSS
Data	PostgreSQL, MongoDB, MySQL, Firebase, Supabase
Also	Flutter, Telegram Bot API & Mini Apps, Docker, Git

EXPERIENCE

Full-Stack Developer · **Bekollo** — Contract · Jun 2026 – Present

- Building the platform as a Telegram Mini App, so customers shop without leaving Telegram.

Full-Stack Developer · **Bego** — Full-time · Jan 2026 – Present

- Building features across the React and Tailwind front end and the Node.js and Express API on PostgreSQL.

Full-Stack Developer · **Itemtab** — Remote · Oct 2025 – Jun 2026

- Built a Telegram bot, an e-commerce platform and an e-learning platform for a US client.

Full-Stack Developer · **House & Car Marketplace** — Remote · Jun 2025 – Oct 2025

- Built the Node.js backend on PostgreSQL: authentication, listings APIs and user management.

Flutter Developer · **Fitness App** — Freelance · Feb 2025 – Jun 2025

- Built workout scheduling, progress tracking and personalized training plans.

Full-Stack Developer · **Nu Events** — Freelance · Oct 2024 – Feb 2025

- Built the Flutter front end for Android and iOS.

Back-End Developer · **Print & Design Company** — Remote · Feb 2023 – Aug 2023

- Implemented order tracking, user access control and data management.

Telegram Bot Developer · **Fiverr and direct clients** — Freelance · 2022 – Present

- Completed more than 15 orders on Fiverr for international clients.

SELECTED PROJECTS

Yazz · With Circle Technology · Business software suite

Focused software for Ethiopian businesses, where each product solves one problem well. I work on Verify, Cafe, and the HR and ERP products now in development.

- Verify: confirms a customer's payment really arrived by matching receipts to the bank's own record, catches reused receipts, and alerts on failed or suspicious payments.

Tunnelly · Developer tool · CLI — npmjs.com/package/tunnelly

Expose a local app through your own domain with one command, like a self-hosted ngrok.

- Node.js relay server and a CLI published on npm, connected over WebSockets.

TypeScript · Node.js · Express · WebSockets · Docker

EDUCATION

BSc, Software Engineering · Addis Ababa University — 2023 – Present
